About Us

Kaleido, located in Raleigh NC, is a rapidly growing tech start-up. Kaleido makes blockchain and digital assets radically simple for organizations to adopt so that businesses and society can benefit from decentralized technologies.Our mission is to help enterprises reinvent how their ecosystems share data, collaborate, and transact. Kaleido has been driving blockchain in the enterprise since the technology's very inception.

At Kaleido, you'll be working on the cutting edge of blockchain and web3 technologies. We are one of the fastest-growing, highest rated tech companies in the blockchain and digital assets space worldwide. Kaleido powers the top blockchain networks and solutions globally and has been featured in WRAL Startup Unicorns, Forbes, CNBC, and many other news outlets. Kaleido received its initial investment from one of the co-founders of Ethereum. Last year the Kaleido team open-sourced its learnings & code from more than a half decade in the blockchain space and is helping drive this major new open source community called Hyperledger FireFly.

The Role

Kaleido is seeking a Cloud Engineer with a passion for engineering high scale infrastructure systems using cutting edge tools and practices. The successful candidate can own end-to-end challenges that span across code, network architecture, and infrastructure. You are also a highly skilled coder who loves to dive deep to solve hard problems and drive scalable implementations. Day to day you will be overseeing a global topology of cloud-based systems including a number of Kubernetes clusters. You will also build Kubernetes operators

and other tools to power scale and automation of the Kaleido platform across its core SaaS microservices, web3 blockchain infrastructure, and more.

Responsibilities

Help oversee and develop the platform and application hosting environment aligning them with business strategies and requirements

Identify and implement development frameworks and technologies,while promoting best-practices

Perform operational engineering for activities which include platform upgrades, patching, monitoring, configuration, and troubleshooting

Diagnose problems observed in test/staging/production environments

Skill Set

Previously has built a cloud SaaS

Experience using Kubernetes on top of AWS, Azure, or GCP

Cloud native monitoring tools, such as Grafana, ELK, Prometheus, DataDog, etc

What We're Looking For

Desire and ability to communicate with customers and team member

Bachelor's degree in Computer Science or related technical field

2+ years working in cloud architecture

2+ years working with AWS cloud

Ability to work with many languages including, but not limitedto, NodeJS, Go, Python, and Angular.

Ability to identify and address key engineering decision points

Flexible approach to working, including on-call responsibilities
