Engineer Reliability Refinery Maintenance / Copper Refineries Townsville, Queensland, Australia Ref. No. 38622 Copper Refineries are currently advertising a Reliability Engineer vacancy that exists in the Maintenance Department. This role will see you become an integral part of Refinery Processing Team. This role is residentially based in Townsville, working a 5/2 roster. Townsville Operations Located on the coast in tropical North Queensland, Glencore's Townsville Operations encompass Copper Refineries Pty Ltd and Glencore Port Operations. Our Townsville Operations mark the final link in Glencore's fully integrated north Queensland supply chain, connecting the natural resources we produce with markets around the world. Copper Refineries Pty Ltd is one the world's leading electrolytic copper refineries, capable of producing 300,000 tonnes per year of premium-quality ISA brand LME Grade A copper cathode using Glencore's proprietary IsaKIDD refining process. Glencore Port Operations at the Port of Townsville is the export gateway for our north Queensland products. We believe in the value of our people and our approach fosters the highest level of professionalism, ownership and entrepreneurial spirit in all our people while never compromising on their safety and well-being. We offer excellent remuneration package and benefits including employee rewards program, above market superannuation and professional development opportunities. Learn more about our Townsville Operations at www.mountisamines.com.au/en/townsville-ops. The Role We currently have a vacancy for a Reliability Engineer to work within our Maintenance Department at the Copper Refineries. This is a residential role, based in Townsville, reporting directly to the Superintendent Refinery Maintenance. The roster worked for this position is day shift,

Monday to Friday. In this role you will provide reliability technical expertise, including managing our condition monitoring program, investigating and executing process and reliability improvements. Your daily requirements will include analysis of plant operation and reliability, working with the Maintenance and Operations teams for machine optimisation, engaging external contractors and suppliers, and assisting with forward planning of maintenance and operation strategies. You will be driven to achieve your targets in the safest and most cost-effective manner. The successful candidate will be responsible for:
