Company: Confidential

Location: Melbourne

Category: computer-and-mathematical

Join this dynamic, fast paced University as an Infrastructure Solution Architect and be a key part of the Architecture & Software Engineering group, responsible for the development of end-to-end Solutions from conceptual through to detailed designs.

Your brand-new role will see you work closely with the Enterprise Architects and other key members across the University to develop, maintain a range of architecture artefacts, including Logical and Physical Solution Designs, Patterns, Standards, Detailed Designs, and also providing inputs to roadmaps and technology/platform strategies.

Key activities

Provide technical leadership across large and complex Infrastructure, Cloud (pref. Azure), Data, Application and Security transformation projects, including the creation and review of Architecture artefacts, migration, and implementation plans

Ensure all solutions designs and related artefacts are fit for purpose

Design, consult and provide quality assurance of complex Infrastructure, Cloud, End-User, Application and Security solutions

Contribute to the development of strategic solutions, including roadmaps, blueprints, patterns, standards frameworks and heatmaps.

Provide thought leadership with key stakeholders

Work within the Architecture and Solutions team to develop or enhance reusable IP such as reference architectures

Contribute to the Architecture Working Group and Architecture Review Board providing quality assurance across all architecture artefacts

Keep up to date on industry trends and assess new products and emerging technologies.

Act as a trusted Advisor across large and complex transformation projects, including design review and input for Public, Private, and Hybrid Clouds

Skills and experience

Minimum 10+ years success in working in Infrastructure solutions and associated Cloud Services

Highly collaborative and supportive of business and of its ideas and strategies

Comfortable, experienced, and accomplished at working with senior business executives

Exposure to multiple, diverse technologies, platforms and processing environments including working across a range of cloud (preference Azure) and on-premise technologies

Good understanding of strategic and new and emerging technology trends, and the practical application of existing, new and emerging technologies to new and evolving business and operating models

Good understanding of product management, agile principles, and development methodologies

Ability to work at varying levels of detail, from high level component/logical architecture to low level detail design.

Knowledge of integration architectures

In depth knowledge of Office 365, Microsoft and Google product suite
