Company: Pyramid Global Technologies

Location: Australia

Category: other-general

### About the job Openshift Container platform

#### Key skill sets:

- Expertise with the Red Hat Open Shift Container Platform administration
- Deploying application through Container orchestration technologies using Docker, Kubernetes, and Red Hat Open Shift Container Platform
- Manage the container platform ecosystem (installation, upgrade, patching, monitoring, SSL certificates deployment, configuring ingress controllers, integrating with load balancers, integrating with identity management tools, etc.)
- Configuring/administering monitoring tools (Prometheus, Grafana, similar tools)
- Logging Tools (ELK Stack, Dynatrace, similar tools) administration
- Good knowledge of management of containers and container images through hands-on experience, along with deploying and troubleshooting containerized applications.
- Knowledge of containers including the ability to find, customize, run, and manage containerized services in both stand-alone environments, and environments with Red Hat Open Shift.
- Review the installation of clusters, including configuration and day-to-day management
- Ability to create, configure, and manage a cloud application platform using Red Hat Open Shift Container Platform
- Essential skills for installing an Open Shift cluster in a range of environments, from proof of concept to production, and how to identify customizations that may be required because of the underlying cloud, virtual, or physical infrastructure.

- Skills required to manage Open Shift clusters at scale to productively support a growing number of stakeholders, applications, and users
- Troubleshoot application deployments issues.
- Control access to projects using role-based access control (RBAC)
- Expose applications to clients external to the cluster using TLS encryption
- Configure network isolation between services and applications using network policies
- Configure application scheduling using labels and selectors
- Limit compute resource usage of applications with resource limits and quotas
- Install Kubernetes Operators with the Web Console
- Deploy and configure resources with the OC commands
- Deploying multi-container applications.
- Query and visualize cluster-wide logs, metrics, and alerts.
- Excellent knowledge in Red Hat Linux/Unix administration
