Software Engineering Program

[Apply Now](#)

Company: University Engineers' Club

Location: Australia

Category: other-general

Don't have a tech degree, self taught development or coding, and looking for a career in the tech space? Our Engineering Consultants work in teams to create innovative solutions that solve our clients' needs. You'll get involved in all aspects of engineering projects: identifying and refining requirements, building and testing custom solutions, implementing platforms to solve needs, and deploying your code all the way through to production. You will have the opportunity to work with a wide range of different technologies and platforms. In your first few years, we want you to have the chance to work across the whole tech stack on our projects. As you gain more experience, the choice will be yours: specialise in one or two key areas, or become the ultimate generalist consultant. Our teams work on projects in a broad range of industries including energy, agribusiness, health, retail, financial services, the public sector, and more. Key recent work includes implementing e-commerce platforms with large Australian retailers, working on person-centric information displays for public spaces, content management systems for international brands, solving a wide range of core banking and insurance problems, and deploying custom cloud infrastructure for public and private sector clients.

WHO ARE WE LOOKING FOR? Our university graduates are the lifeblood of our business. They define our culture and are filling our leadership roles as our business grows. Each year Publicis Sapient take a new crop of graduates and launch them into the world of engineering. Our Early Careers program puts our graduates on a rapid development path that takes them to Senior Associate. We are looking for individuals who can start in October 2024 or March 2025, who excel at solving complex problems, are logical and analytical, build strong relationships, and are adaptable and resilient.

YOUR

QUALIFICATIONS: Bachelor's degree in Software Engineering, Computer Science or a related field. Will consider Graduates that have self-taught in a programming language.
