idR5497AspenTech is a global software leader helping industries meet the increasing

demand for resources from a rapidly growing population in a profitable and sustainable

manner. Our Digital Grid Management software suite, including AspenTech OSI products,

helps power and utilities companies achieve superior real-time control, optimization and

management for exceptional performance of complex energy networks.

The RoleThis position gives you broad exposure to the entire ADMS and will focus on

advanced applications such as Distribution Power Flow (DPF), Fault Location Isolation & Service

Restoration (FLISR), Volt/VAR Control & Optimization (VVC/VVO) and Outage Management

System (OMS). In this role, you will be a primary point of contact with our customers

throughout and after the project lifecycle. You will have the opportunity to work across

functional teams including ADMS Application Engineers, the Architecture & Product Solution

teams, and our Software Development organization. You will be reporting to an ADMS

Delivery Lead or Manager.Your Impact-Technical leadership and face of AspenTech for

projects in the ADMS portfolio

·Implementation of control systems at electric utilities that improve their efficiency to operate the modern grid while ensuring contract requirements and specifications are met

·Participate in design, planning, and execution of ADMS projects

·Support testing events with the customer

·Work closely with AspenTech development teams to troubleshoot, prioritize, and test

product changes

- Interface with the utilities Geographic Information System (GIS) teams to extract, translate, and load the electrical network model to the Distribution Management System
- Configure and integrate software components to meet contract requirement specifications and test with customers
- Train customers on how to operate the systems being delivered
- Provide technical support to troubleshoot and resolve issues observed on live systems

What You'll NeedMinimum Requirements

- Bachelor's degree in Engineering or related field; degree in Electrical Engineer, Computer Engineer, or Computer Science preferred
- 5 years of experience in a similar Application Engineering role; high level of experience troubleshooting complex systems and software applications
- Knowledge of system designs, computer systems, engineering practices, and control systems
- Understanding of Electric Distribution Power Systems and modeling is preferred (Load Flow Studies, Coordination Studies, Arc Flash Studies)

PreferredRequirements

- Master's degree in Power Systems Engineering or related field
- Programming and scripting experience (C/python)
- Database and data structure knowledge and experience (SQL, XML, Mongo, GIS)
- Operations or engineering experience at an electric utility
- Industry experience with Outage Management Systems (OMS)

Soft Skills Required

- Strong communication skill, both verbally and written
- Proven ability to organize and prioritize work within tight timelines
