Company: Asocusyd

Location: Perth

Category: other-general

### Technical Consultant Virtual Experience – SAS Enterprise Guide

In this virtual experience you will gain insight into the work of a SAS Technical Consultant and use SAS technology to build a selection of reports for a study on ordering patterns. Even though this task can be accomplished through programming, we will be using a point and click interface to generate the reports. Welcome to the SAS Technical Consultant Virtual Experience using SAS Enterprise Guide. Some people see data as facts and figures. But it's more than that. As the leader in business analytics software and services, SAS transforms data into insights that give organisations a fresh perspective on their business. They can identify what's working. Fix what isn't. And discover new opportunities. SAS Technical Consultants provide consulting and implementation services including requirements gathering, analysis, solution development, knowledge transfer and project closeout both off and on customer site. Why should you do this? This Virtual Experience Program is self-paced and should take only 2 to 3 hours to complete.

This Virtual Experience Program is free for all students.

When you complete the Virtual Experience Program, you'll earn a digital badge and certificate you can share on LinkedIn and include on your resume.

In this virtual experience, you will have hands on experience with SAS technology to create a replica of a real live report for a corporate SAS customer. What skills will I gain?

Reviewing the customer requirements  
Exploring and preparing the data source  
Building a report  
Understand the differences between using point and click and SAS code  
What you will do?

Module 1: Scoping The WorkFirst up, we need to draft questions for the business and technical teams in order to scope the project.Module 2: Process DesignNext, we need to design how the process should work for guest users.Module 3: Measuring SuccessTo make sure the recommendations we've proposed are working, we'll need to develop metrics to measure success of the feature.Module 4: IdeationNow that we've solved the immediate problem, it's time to ideate and come up with ideas to extend the feature in the future.Ready to get started?
